

Project Title: Streamlining IT Procurement: Automating Standard Laptop Orders with Flow Designer

Phase: 5 Project Development Phase

Comprehensive Flow Designer Construction Steps

1. Log into your assigned **ServiceNow Instance** using your administrator or developer credentials.
2. Navigate to the left-hand Application Navigator panel, select **All**, search for **Flow Designer**, and click it under the **Process Automation** menu header.
3. Once the Flow Designer workspace interface loads completely, click **New** in the upper-right corner and select **Flow** from the dropdown menu.
4. Fill in the **Flow Properties** configuration dialog box with the following parameters:
 - **Flow Name:** Standard laptop task [3]
 - **Description:** Automated workflow designed to instantly provision hardware configuration sub-tasks for incoming standard laptop procurement orders.
 - **Application:** Global [3]
 - **Run As:** Select the dropdown choice **System User**. *(This ensures that individual end-user ACL restrictions are bypassed during database insert)*

tasks).

The screenshot shows the ServiceNow interface for a Request record (REQ0010001). The form includes fields for Number, Requested for, Location, Due date, Price, Description, Short description, Special instructions, and Work notes. The Requested for field is set to 'System Administrator'. The Due date is '2026-09-26 07:03:24'. The Price is '₹105,399.0617'. The Request state is 'Pending Approval'. The Activities section shows one activity performed by 'System Administrator' on '2026-09-26 07:03:25' with an impact of '3 - Low'. The bottom of the screen shows a Windows taskbar with the date '29-09-2026' and time '15:37'.

Click **Submit** to open the visual layout canvas.

In the canvas workspace layout, locate the trigger area and click **Add a trigger**.

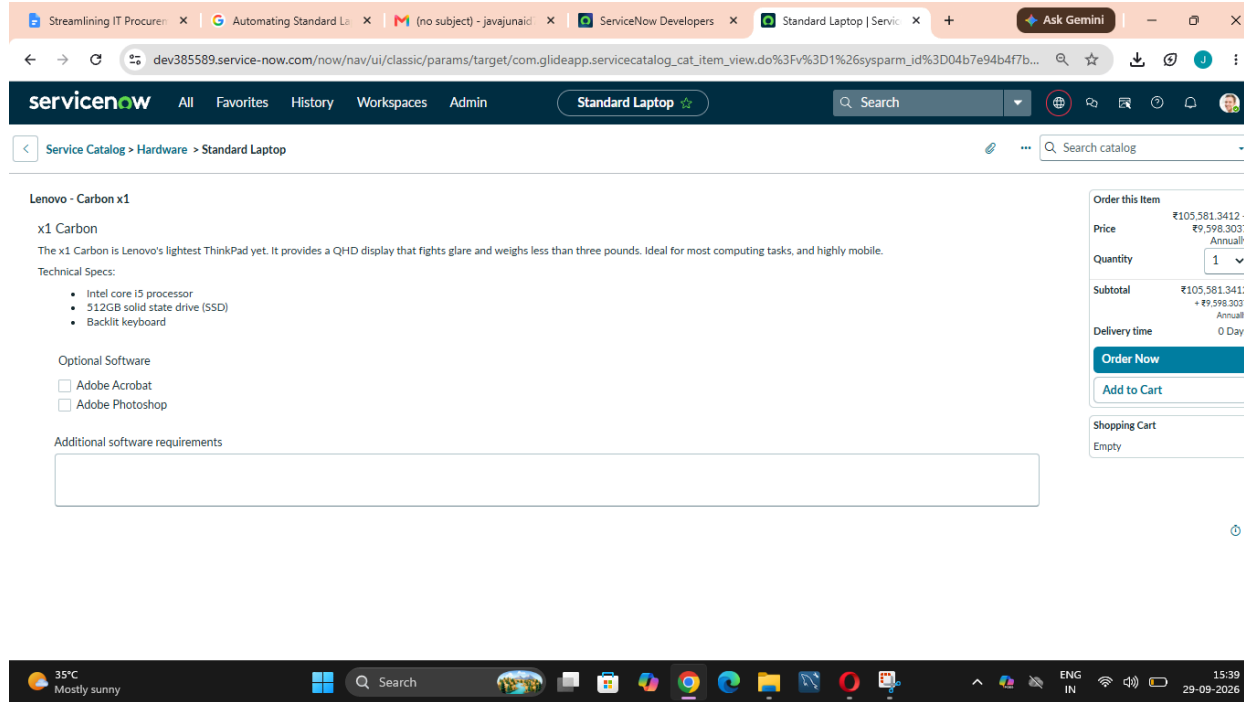

In the search box that appears, type **Service Catalog**, select it from the filtered options list, and click **Done**.

Navigate to the **Actions** layout block section and click **Add an action**.

In the action search directory lookup window, type **Create Catalog Task** and click on that option block.

Define the operational fields inside the action card interface using the following detailed values:

- Locate the right-hand **Data Pill Selector** panel. Drag the **Requested Item Record** variable chip out of the trigger tree and drop it into the **Request item** input field.
- Verify that the database **Table** destination line auto-populates directly to `Catalog Task [sc_task]`.
- Input the exact string literal `Laptop need to Configured` into the **Short descri**

ption field box.

- Click the **Add field value** utility option link to declare the rest of the target values:
 - i. Choose **Description** from the column field selector list -> Set value to `Laptop need to Configured`.
 - ii. Choose **Assignment group** from the column field selector list -> Search for and select the group value `Hardware`.
 - iii. Choose **Approval** from the column field selector list -> Set the selection state choice value to `Approved`.
- Click **Done** at the bottom of the active action editing card block.
- Go to the top primary menu configuration utility header toolbar and click **Save**.
- Click the **Activate** button. When the confirmation dialog appears, click **Activate** once more to push the flow live into the platform runtime environment.

5.2 Linking the Automation Workflow to the Target Catalog Asset Item

1. Close the Flow Designer interface window tab to return to the standard **ServiceNow Platform Native Frame UI** workspace view.
2. Go to the navigation filter input box at the top left, type **Maintain Items**, and select the module option from the filtered app menu list.
3. In the list header filter text box for the **Name** column, search for **Standard Laptop** and click the matching record line to open it.
4. Scroll down the record configuration sheet form to locate the **Process Engine** configuration tab.
 - Clear out any preexisting text values present inside the legacy **Workflow** or **Execution Plan** selection input lines.
 - Locate the **Flow** option lookup input line, click the magnifying glass search reference icon, and select the newly activated workflow row: **Standard laptop task**.
 - Click the top application form header context menu bar, open it, and select **Save** to update the catalog engine definitions.

Attaching the Automation Flow to the Catalog Asset

1. Exit the Flow Designer view to return to the standard native **ServiceNow Platform Frame UI**.
2. In the navigation filter menu on the left, search for **Maintain Items** and click it.
3. Locate the **Name** column search box, input **Standard Laptop**, and press enter to open the record.
4. Locate the **Process Engine** configuration section tab located on the lower half of the item definition sheet.
5. Clear any legacy entries out of the Workflow field.
6. Find the **Flow** option field, click the search icon, and select your newly built flow: **Standard Laptop Task**.
7. Click the top context menu option header and select **Save** to commit the settings.
