

Project Name: Streamlining IT Procurement: Automating Standard Laptop Orders With Flow Designer

Team Member 1 – Bavadharini: Responsible for designing the Service Catalog entry, creating the standard laptop request form, and configuring user-friendly fields (such as laptop model selection and department details) in the Service Portal.

Team Member 2 – Bismiya: Responsible for building the core automation workflows using Flow Designer, defining the exact trigger conditions when a laptop request is submitted, and structuring the background process flow.

(Leader) Team Member 3 – Jafrin Sabura: Responsible for managing the overall project deliverables, configuring complex approval routing logic within Flow Designer, and setting up automated task assignments for the hardware fulfillment team.

Team Member 4 – Dharshini: Responsible for creating test scripts, executing end-to-end testing of the procurement flow, and ensuring data transitions correctly from the catalog request form to the backend fulfillment tasks.

Team Member 5 – Harshini: Responsible for tracking fulfillment performance against SLA metrics, creating comprehensive delivery reports, and designing the final interactive management dashboard to visualize the streamlined IT procurement process.
